Did you know that penis size can vary from less than 7 cm to more than 20 cm when erect? Did you know that some penises develop a curvature that can interfere in sexual relations? Did you know that there is an old technique used to allow the penis to grow both in length and girth, and to also correct curvatures? Did you know that after a penile surgical procedure it is necessary to stretch the tissues in order to avoid the loss in length due to retraction effect while healing?

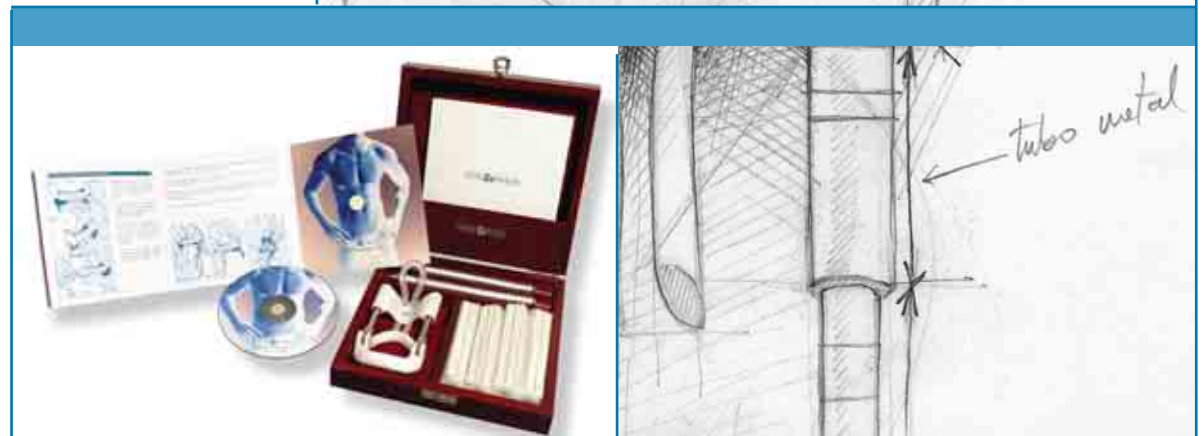

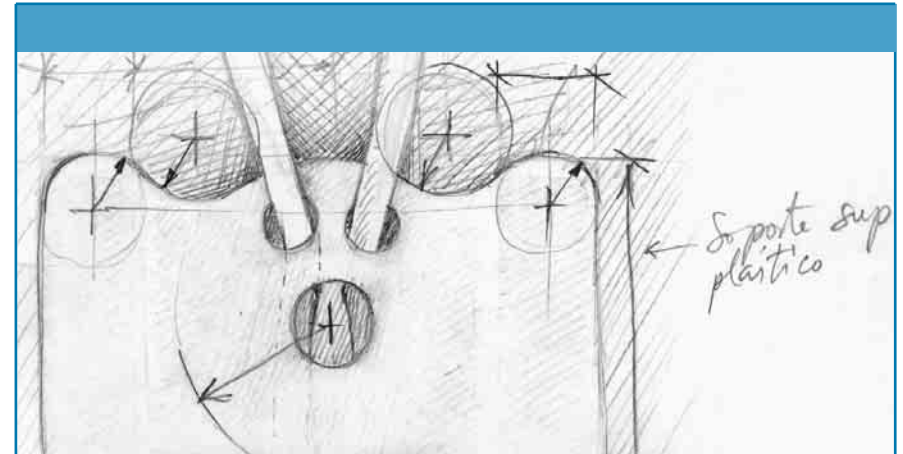

Andromedical was created in 2000 to answer all these questions and to offer a reliable medical solution to doctors (urologists, andrologists, sexologists) and to all men. **Dr. Eduardo Gómez de Diego** saw more than a thousand men in his clinic before starting to investigate a proper response to them with the **ANDRO-PENIS®**. Today, there is still a lack of information regarding penile issues. Men are less likely than women to visit a doctor, or to talk about sexual related topics. Nonetheless, there has been an upsurge recently regarding sexuality or men's health content in the internet, magazines, radio stations and tv

channels. The mass media have come to understand the importance of including sex topics in their general health-lifestyle contents.

How has **ANDROMEDICAL®** contributed to all this? By developing a strategy towards the media, consisting of offering all kinds of scientific data, general information and press releases related to penis size and the scientific explanation behind the **ANDRO-PENIS®**. Andromedical has made available to the media more than a dozen studies carried out by prestigious urologists, presented at international medical congresses and published in medical journals.

Regardless of the infinite number of web pages dedicated to the penis, men, and the public in general, do not know that there is a medical, simple, non surgical answer to curvatures or to penis size. And there is. **ANDRO-PENIS®** carries CE Health Authorities Certification as **Type 1** medical device, and the company has been certified with the quality standards certification **UNE EN-ISO 9001:2000**. It is the world's leading company offering a

guaranteed solution to penis size and curvature correction. There is a growing network of doctors worldwide working with the **ANDRO-PENIS®**, and offering advice to patients regarding the treatment. Andromedical also has its own department of with medically trained professionals offering information and support for clients by phone and e-mail.

Zu kurz geraten?
Spannen verlängert den Penis

Medical Tribune Bericht

HAMBURG - Obwohl die Standardmaße durchaus eingehalten sind, meint Ihr Patient, einen zu kurzen Penis zu haben, Er überlegt schon, ob er sich nicht operieren lassen soll. Doch es gibt auch eine weniger drastische Methode, das beste Stück imposanter aussehen zu lassen.

Die Technik klingt banal, scheint aber tatsächlich zu funktionieren. Um den Penis wachsen zu lassen, zieht man ihn einfach in die Länge! Allerdings muss der "Patient" schon etwas Geduld haben. Mindestens vier Monate lang und sechs Stunden täglich muss sich sein "kleiner Freund" in einer speziellen Spannvorrichtung in Form bringen lassen. Bei neun gesunden Männern erproben Professor Dr. Giovanni M. Colpi und Kollegen von der Abteilung für Andrologie an der Universitätsklinik Mailand das Andro-Penis® genannte Gerät. Die Probanden erreichten nach vier Monaten "Penis-Dehnung" einen Längenzuwachs von im Schnitt 1,8 cm. Besonders langgezogene Studienleiternehmer, die ihren Penis 7 - bis 9 Stunden täglich entspannten, konnten sogar zwischen 2,4 und 3,1 cm zusätzliche Länge verbuchen.

¿Cómo se mide la longitud?

La longitud del pene se mide con un instrumento de medición que se llama "regla de medición". Este instrumento se coloca sobre el pene y se mide la longitud del pene en su estado natural, sin estar erecto. La longitud del pene se mide en centímetros y se redondea hacia arriba. El tamaño, en China, sí importa

Un estudio español que aparentemente alarga el pene en 3 centímetros tiene éxito.

Los científicos, "en particular, se preocupan de conocer el tamaño del pene en los hombres que se someten a una cirugía de aumento de tamaño. Este estudio se realizó en un hospital de la Universidad de Zaragoza, España, y se publicó en la revista médica "The British Medical Journal".
